**Date:** 12/17/2025  
**Re:** Alliance Police Department First Department in the State of Nebraska to Fully Deploy BolaWrap Devices to All Officers

**Alliance, NE:** When I came to Alliance, my message was simple, just because we are a small police department does not mean we cannot be a modern and professional one. Over the past two years, we have strengthened communication with our community, and replaced aging equipment across the department, including vehicles, body-worn cameras, in-car cameras, mobile laptops, ballistic vests, handguns, rifles, and our new Motorola P25 radio system. We have added Stop Stix to every vehicle, and we are in the process of developing a drone program. We are also in discussions with Flock to replace an inadequate camera and LPR system, ensuring improved investigative and crime prevention capability.

Today, I am proud to share the following news release from Wrap Technologies, Inc. announcing our commitment to equip every Alliance Police Officer with the BolaWrap, a proven de-escalation tool that will help officers safely and humanely take suspects into custody, reducing the risk of injury to both the public and our officers. This partnership reflects our continued efforts to use every available resource to build a strong, modern police department, one that holds offenders accountable, while leveraging best practices and technology to keep the use of force to a minimum.

## **Alliance Police Department Commits to Non-Lethal Response with Full BolaWrap® 150 Rollout**

MIAMI, FL – December 16<sup>th</sup>, 2025 – Wrap Technologies, Inc. (NASDAQ: WRAP) (“Wrap” or the “Company”), a global leader in non-lethal response and public-safety technology solutions, today announced that the Alliance Police Department (APD) has purchased and fully deployed BolaWrap® 150 devices across the department, becoming the first municipal police department in the State of Nebraska to equip every sworn officer with an immediate non-lethal response option.

The deployment reflects Alliance PD’s and Chief Leavitt’s commitment to modern policing strategies that emphasize safer outcomes for both officers and the community. The program is structured as an integrated non-lethal response framework that combines equipment, training, tactics, and policy alignment rather than a standalone technology deployment.

As part of the initiative, participating officers will be equipped with the BolaWrap® 150, along with access to WrapTactics™ digital training and modernized instructional resources designed to support lawful, measured responses during high-stress encounters. The training approach focuses on consistent decision-making, tactical awareness, and proportional response, aligned with constitutional policing principles and contemporary best practices.

This integrated ecosystem connects training, operational guidance, and practical control tactics to help officers create time, space, and additional response options during rapidly evolving calls, particularly those involving behavioral-health crises, emotionally disturbed individuals, or situations where lethal force may not be necessary or appropriate.

The BolaWrap® 150 device is intended for use across a range of real-world scenarios, including mental-health and behavioral-health crises, encounters involving non-compliant but non-violent individuals, and situations where verbal de-escalation alone may be insufficient. The tool provides officers with a non-lethal option while reducing the need to escalate to higher levels of force, supporting safer outcomes for officers, subjects, and the community.

The Alliance Police Department is responding to an increasing number of behavioral- and mental-health calls, welfare checks, and complex encounters that fall outside traditional tools and tactics. By fully deploying BolaWrap® 150 devices to every officer, the department is expanding its toolkit to better reflect the realities of modern policing.

Under this deployment, Alliance PD joins a growing number of agencies nationwide implementing fully integrated non-lethal response programs, positioning non-lethal tools not as a last resort, but as an early intervention option designed to reduce injuries, complaints, and unintended outcomes.

Wrap Technologies believes Alliance PD's approach may serve as a model for other municipal police departments seeking to build safer outcomes for their officers and the community they serve.
